DETAILED ACTION

Claims 1 – 16 have been canceled. Claims 17-30 are pending. These claims are directed to a method of manufacturing a semiconductor device.

Claim Rejections - 35 USC § 102

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 17 – 30 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1 - 16 of prior U.S. Patent No. 6624010. This is a double patenting rejection.

Ikegami, U.S. Patent 6,624,010 discloses a method of manufacturing semiconductor devices. The method comprises the steps of forming an SOI layer 30 on silicon oxide layer 20. Cobalt 40 is formed on the SOI layer 30. CoSi is formed by annealing the structure, as explained in column 3, line 27. A silicon oxide layer 60 is formed on the CoSi layer. A contact hole 90 is formed to expose a part of the CoSi

layer. A second anneal is then performed. The second anneal is rapid at 800 degrees Celsius, while the first is at 450 –550 degrees.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Horiuchi et al., U.S. Patent 6,800,513, discloses a method of manufacturing a semiconductor device.

Dennard et al., U.S. Patent 6,664,598 discloses a method of manufacturing a polysilicon back gated SOI MOSFET. As shown in Figure 1, oxide layer 12 isolates Si substrate 10 from SI layer 14, which is the SOI layer.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roy K Potter whose telephone number is 571 272 1842. The examiner can normally be reached on M-F.
